

Fire Access Doors

With PMC's high temperature access doors and our access door panels we can accommodate any fire access door requirement for your specific job. Fire Access Doors are available insulated and ready to install or uninsulated at a savings.

When ordering insulated or uninsulated fire access doors please specify layers and thickness of insulation to be installed on access door panels, as well as whether 1000 or 2300 degree.

Only 2300 degree rated doors are legal for grease duct applications.

Note: *1000 degree doors are not rated for fire stop applications.
