

TADPOLE GASKETS

DESCRIPTION

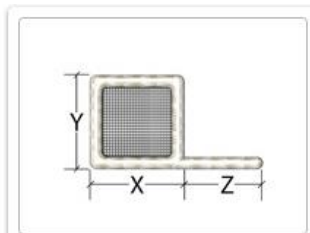

Tadpole gaskets (fiberglass and ceramic fiber) are useful due to the thickness and compression of the bulb material which allows rebound from compression and lets the tadpole conform to uneven surfaces. PTI Thermal Solutions offers a large variety of high temperature gaskets for a wide range of applications.

Applications Include:

Industrial furnace and oven door seals, boiler, powder coating for automotive requirements, dryers, soil contamination equipment, batch ovens, conveyors, walk-in ovens, heat treating processes, filters, glass and crown furnace needs, pulp and paper hatches, power generation exhaust and plenum parts, and much more.
